62 }

```

6.3 卡特兰数 Catalan

1. 有 $2n$ 个人排成一行进入剧场。入场费 5 元。其中只有 n 个人有一张 5 元钞票，另外 n 人只有 10 元钞票，剧院无其它钞票，问有多少中方法使得只要有 10 元的人买票，售票处就有 5 元的钞票找零？
2. 一位大城市的律师在她住所以北 n 个街区和以东 n 个街区处工作。每天她走 $2n$ 个街区去上班。如果他从不穿越（但可以碰到）从家到办公室的对角线，那么有多少条可能的道路？
3. 在圆上选择 $2n$ 个点，将这些点成对连接起来使得所得到的 n 条线段不相交的方法数？
4. 对角线不相交的情况下，将一个凸多边形区域分成三角形区域的方法数？
5. 一个栈（无穷大）的进栈序列为 $1, 2, 3, \dots, n$ 有多少个不同的出栈序列？
6. n 个结点可构造多少个不同的二叉树？
7. n 个不同的数依次进栈，求不同的出栈结果的种数？
8. n 个 $+1$ 和 n 个 -1 构成 $2n$ 项 a_1, a_2, \dots, a_{2n} ，其部分和满足 $a_1 + a_2 + \dots + a_k \geq 0 (k = 1, 2, 3, \dots, 2n)$ 对与 n 该数列为？

H0	H1	H2	H3	H4	H5	H6
1	1	2	5	14	42	132

关于 Catalan 数的常见公式：

$$H_n = \begin{cases} \sum_{i=1}^n H_{i-1}H_{n-i} & n \geq 2, n \in \mathbf{N}_+ \\ 1 & n = 0, 1 \end{cases}$$

$$H_n = \frac{H_{n-1}(4n-2)}{n+1}$$

$$H_n = \binom{2n}{n} - \binom{2n}{n-1}$$

$$H_n = \frac{\binom{2n}{n}}{n+1} (n \geq 2, n \in \mathbf{N}_+)$$

6.4 斯特林数 Stirling

6.4.1 第一类斯特林数

(斯特林轮换数)

$\left[\begin{smallmatrix} n \\ k \end{smallmatrix} \right]$ 表示将 n 个两两不同的元素, 划分为 k 个非空圆排列的方案数。
递推式

$$\left[\begin{smallmatrix} n \\ k \end{smallmatrix} \right] = \left[\begin{smallmatrix} n-1 \\ k-1 \end{smallmatrix} \right] + (n-1) \left[\begin{smallmatrix} n-1 \\ k \end{smallmatrix} \right]$$

边界是 $\left[\begin{smallmatrix} n \\ 0 \end{smallmatrix} \right] = [n=0]$ 。

6.4.2 第二类斯特林数

(斯特林子集数)

$\left\{ \begin{smallmatrix} n \\ k \end{smallmatrix} \right\}$ 表示将 n 个两两不同的元素, 划分为 k 个非空子集的方案数。
递推式

$$\left\{ \begin{smallmatrix} n \\ k \end{smallmatrix} \right\} = \left\{ \begin{smallmatrix} n-1 \\ k-1 \end{smallmatrix} \right\} + k \left\{ \begin{smallmatrix} n-1 \\ k \end{smallmatrix} \right\}$$

边界是 $\left\{ \begin{smallmatrix} n \\ 0 \end{smallmatrix} \right\} = [n=0]$ 。

6.4.3 上升幂与普通幂的相互转化

我们记上升阶乘幂 $x^{\overline{n}} = \prod_{k=0}^{n-1} (x+k)$ 。

则可以利用下面的恒等式将上升幂转化为普通幂:

$$x^{\overline{n}} = \sum_k \left[\begin{smallmatrix} n \\ k \end{smallmatrix} \right] x^k$$

如果将普通幂转化为上升幂, 则有下列的恒等式:

$$x^n = \sum_k \left\{ \begin{smallmatrix} n \\ k \end{smallmatrix} \right\} (-1)^{n-k} x^{\overline{k}}$$

6.4.4 下降幂与普通幂的相互转化

我们记下降阶乘幂 $x^{\underline{n}} = \frac{x!}{(x-n)!} = \prod_{k=0}^{n-1} (x-k)$ 。

则可以利用下面的恒等式将普通幂转化为下降幂：

$$x^n = \sum_k \left\{ \begin{matrix} n \\ k \end{matrix} \right\} x^{\underline{k}}$$

如果将下降幂转化为普通幂，则有下列恒等式：

$$x^{\underline{n}} = \sum_k \begin{bmatrix} n \\ k \end{bmatrix} (-1)^{n-k} x^k$$

6.5 范德蒙德卷积 Vandermonde_Convolution

$$\sum_{i=0}^k \binom{n}{i} \binom{m}{k-i} = \binom{n+m}{k}$$

从数量分别为 n 和 m 的石堆中总共选取 k 个石子。
